

# Valuation Averaging

How General Rates are calculated

General Rates are calculated based on land valuations and rating categories. In 2024-2025, Ipswich City Council will average a property's past three land valuations to determine the rateable valuation for that property. This figure will be used to calculate the property's General Rates charge.

## Why do we average?

The benefits of calculating a rateable valuation using three year averaging:

- to reduce the impact of valuation increases
- valuation increases are spread over a three year period, rather than the current one year.

## How the Rateable Valuation is calculated

Where a property has a valuation for the current year and the past two years, the three valuations are averaged to provide the rateable valuation for the current year.

### Example

Financial Year	Property Value
2022-2023	\$227,500
2023-2024	\$305,000
2024-2025	\$305,000
	<u>\$837,500</u>
	÷ 3
<b>Rateable Valuation</b>	<b>\$279,166*</b>

If a property has a valuation for the current year, but not for either of the two prior years, a three year averaging number is applied. This number is calculated using the valuations across the whole of the city.

### Example

Financial Year	Property Value
2022-2023	Nil
2023-2024	Nil
2024-2025	\$305,000
	<u>\$305,000</u>
	x 0.92
<b>Rateable Valuation</b>	<b>\$280,600*</b>

\*The rateable valuation cannot be greater than the valuation for 2024-2025.
